- ✓ Voice calls to Apple Watch with auto-answer
- ✓ Member micro-surveys sent directly to Apple Watch
- ✓ Only those features needed are enabled

What customers say

“The app works exactly as we hoped it would. Absolutely wonderful— gives us great peace of mind.”
— App Store user

The BoundaryCare app was loaded onto [Dad’s] watch, and now the kids, all over the country and locally, can work as a team to keep an eye on him. If he takes a walk, we will know before he gets too far. We can also tell his heart rate and other health info. It was simple to set up and share with siblings around the US.
— Jodie S.

Over half of caregivers surveyed think BoundaryCare will allow them to keep their aging loved one at home longer—and two thirds of that group estimate a year longer or more. BoundaryCare has sent fall alerts for half of all users, and heart rate or rhythm alerts for one in six.
